

INDUS GATEWAY WEBSITE FEEDBACK AND SUGGESTIONS

Elements of a Website

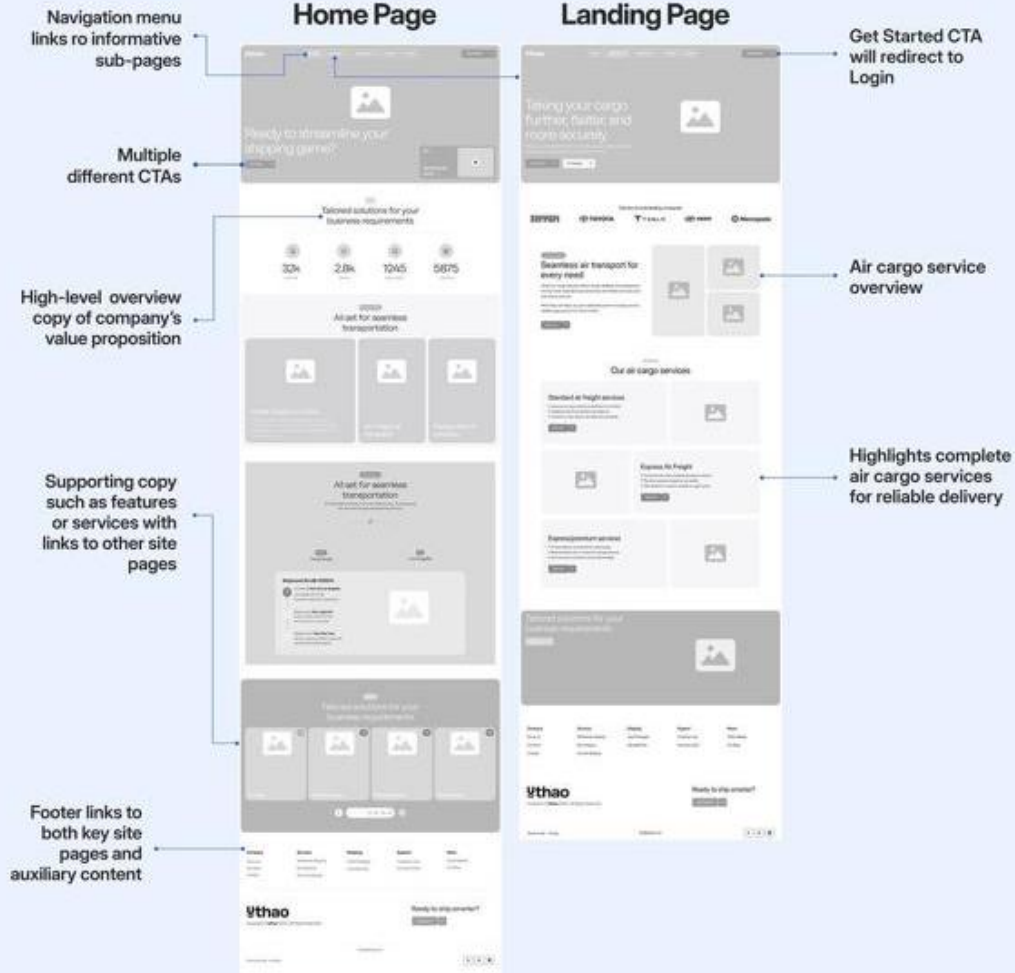

High-performing websites aren't random designs, they're structured for conversion.

HERE'S WHAT ACTUALLY MATTERS:

- ☞ Clear navigation (no confusion, no friction)
- ☞ A strong headline that grabs attention instantly
- ☞ Value-driven body copy (not just filler text)
- ☞ Product/service sections built for real user intent
- ☞ Blog posts/Testimonials that build instant trust **(Optional)**
- ☞ A CTA that tells users exactly what to do next
- ☞ Lead capture that feels natural, not forced

Home Page VS Landing Page

Home Page VS Landing Page

Most people use them interchangeably.
But they serve completely different purposes.

Home Page

- Built for exploration
- Includes multiple CTAs
- Helps users navigate the website
- Gives a broad overview of the brand

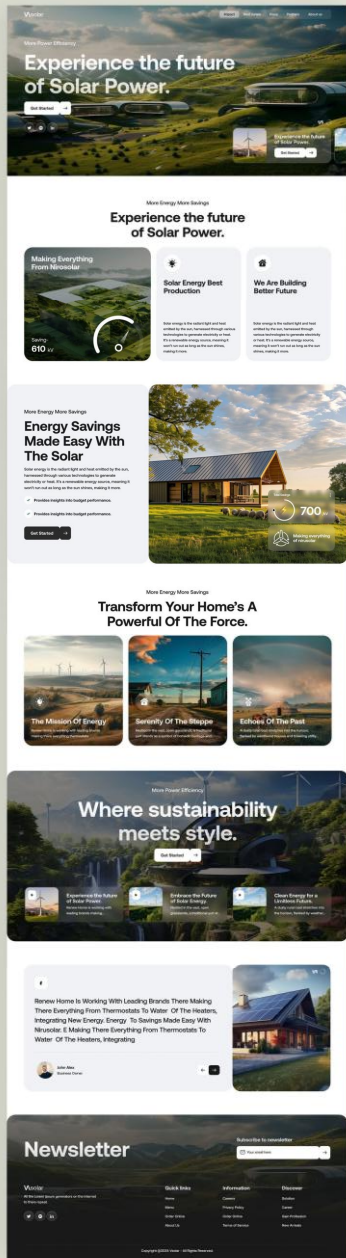

Landing Page

- Built for one specific goal
- Focused on conversions
- Removes distractions
- Guides users toward a single CTA

A homepage informs.

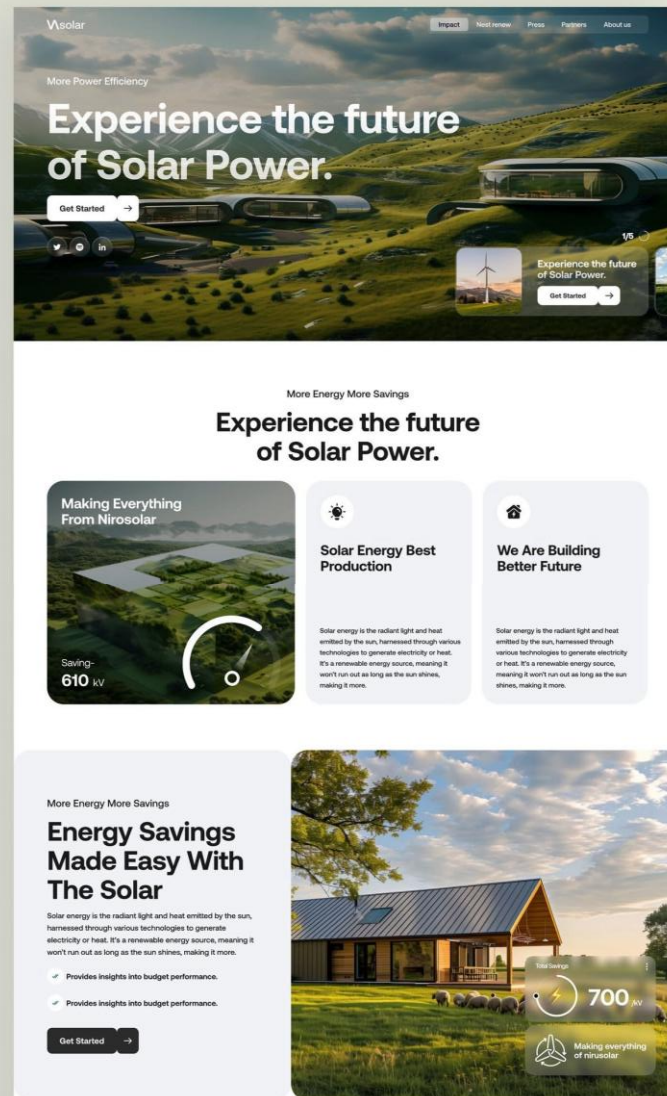

A landing page converts.

The best-performing brands know when to use each strategically.

PRO TIP ON WEBSITE:

One thing that can make a huge difference is **page speed and mobile responsiveness**; even the best structure can lose conversions if the site feels slow or hard to use on mobile.

Website Link: <https://storied-dango-928eb1.netlify.app/>

Feedback on Current Website/Layout:

I reviewed the site: Indus Gateway – Vendor-Neutral Connectivity Aggregation. The concept is strong and relevant, especially for carriers, ISPs, and enterprise connectivity buyers looking for a neutral marketplace approach. **However, the website currently feels more like a product concept page than a commercial lead-generation website.**

Overall Score: 5.8/10

Area	Score
Design	8/10
Messaging	5/10
Trust Building	4/10
Lead Generation	4/10
Conversion Optimization	3/10
Enterprise Readiness	5/10

SUGGESTIONS ON IMPROVEMENT AREAS

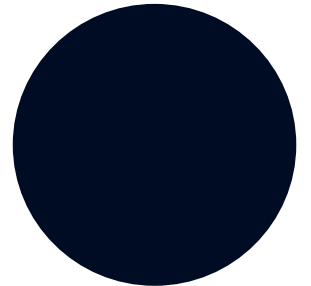

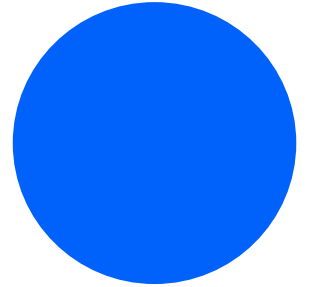

Design

Look & Feel

- Dark navy and light grey or similar Pantone shades
- Clean enterprise design
- Real photography
- Minimal animations
- Executive audience

Best for:

- Enterprises
- Government
- Banking

Homepage Flow

SECTION 1 - Homepage (Hero)

Headline

One Partner. Every Network.

Subheading/Sub Text

Indus Gateway is a vendor-neutral connectivity aggregator and managed services provider that helps enterprises, ISPs, government organizations, and cloud-native businesses procure, manage, and optimize network services through a single accountable partner.

Explore Services

SECTION 2 - Problem Statement

Connectivity Procurement Is Broken

Managing connectivity across multiple providers creates unnecessary complexity.

- Multiple contracts
- Multiple SLAs
- Multiple support teams
- Limited visibility
- Lengthy negotiations
- Increased operational burden

We Simplify It

With Indus Gateway, you get:

- One partner
- One support team
- One operational framework
- One management portal
- One accountable relationship

SECTION 3 - Services (What we do)

Comprehensive Connectivity & Managed Services

Transit Aggregation

Access wholesale IP transit capacity from multiple upstream providers with SLA-backed performance and managed routing.

Inter-City Connectivity

Reliable connectivity across Pakistan through leased lines, MPLS, SD-WAN and dark fiber solutions.

Cloud Connectivity

Private connections to AWS, Microsoft Azure and Google Cloud for secure, low-latency performance.

Managed Network Operations

24/7 monitoring, vendor management, incident handling and performance reporting.

Professional Services

Network audits, vendor negotiations, migration planning and connectivity consulting.

SECTION 4 – How we work (Optional)

Assess

Understand your business and technical requirements.

Source

Engage multiple providers on your behalf.

Compare

Evaluate pricing, performance and SLA options.

Negotiate

Secure competitive commercial terms.

Implement

Coordinate deployment and activation.

Manage

Provide ongoing monitoring and support.

Optimize

Continuously improve performance and resilience.

SECTION 5 – USP (Why Organizations Choose Indus Gateway)

Vendor Neutral

Recommendations are based on your requirements—not ours.

Wholesale Buying Power

Benefit from aggregated demand and stronger commercial terms.

Managed Operations

One partner managing all provider relationships and service delivery.

SECTION 6 – Industries (Who we serve)

Enterprises

Multi-site connectivity and cloud access.

ISPs & Carriers

Transit, routing, and backbone connectivity.

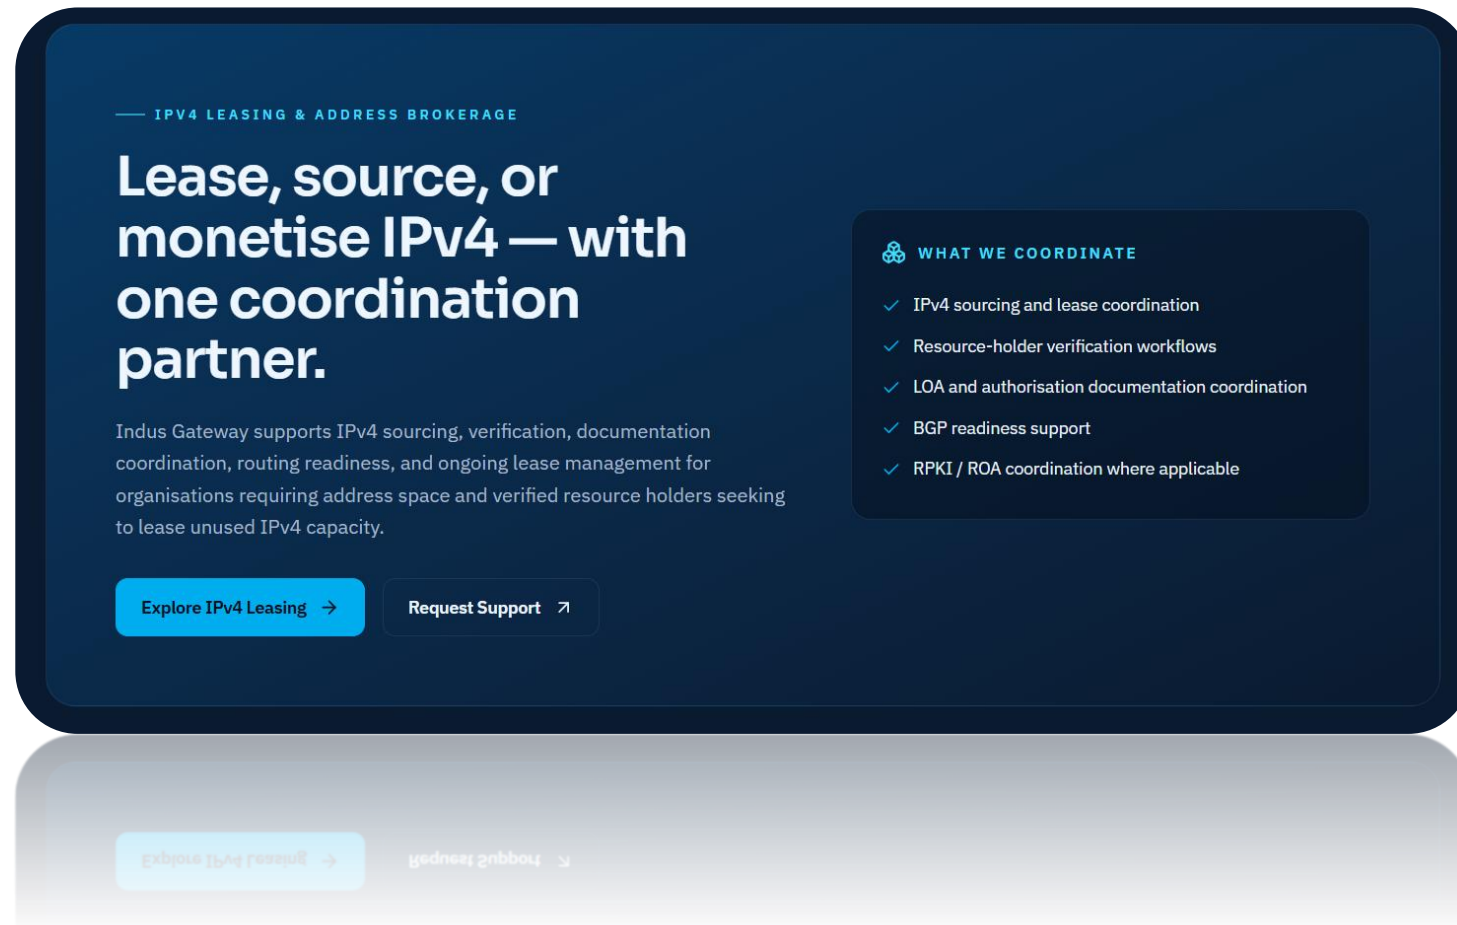

Government & Public Sector

Reliable, compliant, and locally accountable services.

Cloud-Native Businesses

Enterprise-grade connectivity without procurement complexity.

SECTION 7 – Partner Ecosystem (Optional) / Value Additions being offered

— IPV4 LEASING & ADDRESS BROKERAGE

Lease, source, or monetise IPv4 — with one coordination partner.

Indus Gateway supports IPv4 sourcing, verification, documentation coordination, routing readiness, and ongoing lease management for organisations requiring address space and verified resource holders seeking to lease unused IPv4 capacity.

[Explore IPv4 Leasing →](#) [Request Support ↗](#)

WHAT WE COORDINATE

- ✓ IPv4 sourcing and lease coordination
- ✓ Resource-holder verification workflows
- ✓ LOA and authorisation documentation coordination
- ✓ BGP readiness support
- ✓ RPKI / ROA coordination where applicable

SECTION 8 – Governance & Compliance (Optional)

Trusted. Compliant. Accountable.

- SECP Registered
- PTA Authorized Services
- APNIC Resource Management
- SLA-Based Service Delivery
- Governance-Focused Operations

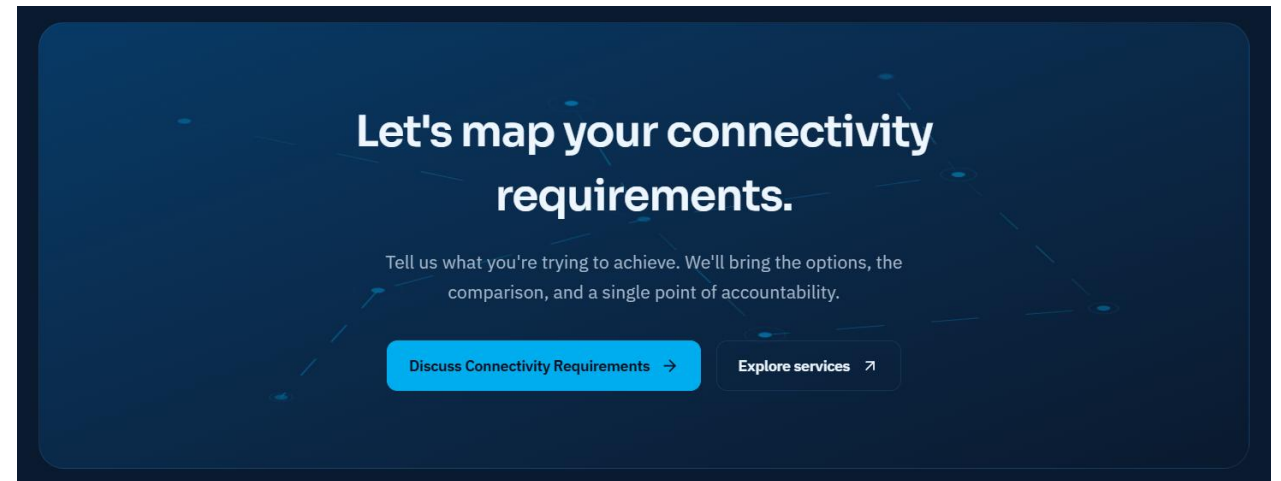

SECTION 9 – Governance & Compliance (Optional)
